

Ferguson Knowles Funeral Home

1657 Mountain Road, Moncton, NB

Natural gas customer since 2004

Wendell Ferguson, along with a partner, opened the Ferguson Knowles Funeral Home in January 1994. Mr. Ferguson is committed to providing personalized, professional service and believes that small, thoughtful extras are the key to great service. Part of great service is providing a comfortable environment for families and friends during a difficult time.

The funeral home is a modern facility with 12,000 square feet of space featuring two bright visitation rooms, a chapel with seating capacity for 250 people, and a large reception room.

Mr. Ferguson converted his first electric rooftop unit to natural gas in 2004 after his service provider, Climate Control, recommended natural gas. The compressors on the electric equipment were noisy and maintenance was becoming too costly. He was so pleased with the first natural gas rooftop unit that he converted a second electric rooftop unit to natural gas in 2005.

“Our natural gas rooftop units are much quieter than the previous electric equipment, which is important when you operate a funeral home. When I need heat in the building, the natural gas rooftop units respond quickly and quietly”

Wendell Ferguson, Owner

Previous energy & equipment:

FROM ELECTRIC:

- 2 roof top units

Primary use of new equipment:

- Space Heating

Emissions reduction:

- Conversions from electric space heating to natural gas space heating = 49 tonnes per year Greenhouse Gas Emissions reduction

Other benefits:

- Instant heat warms the space up quickly, particularly in the morning, or whenever needed
- Conversion was ‘same day’; very quick and easy
- Fewer maintenance costs since converting to natural gas rooftop units
- Natural gas is clean, quick, and quiet
